

Wireless link

Wireless link connection

Helping to create a tidy and safe working environment where you can use your interactive whiteboard without having to worry about trailing wires.

For use with the PRESENTA range of interactive whiteboards, the wireless link provides a cable-free connection between your computer and interactive whiteboard, which is particularly useful if you want to share your board between rooms.

The link comprises of two adapters. You simply plug one adapter into the back of your PC and the other into the back of your interactive whiteboard. The two adapters then communicate with each other using Bluetooth technology, replacing the need for a cable.

Because the wireless link is easy to install and reduces set up time, each time you move your interactive whiteboard you will be able to start using the board with the minimum of fuss.

The wireless link also extends the distance allowed between your computer and interactive whiteboard. You could place your computer almost anywhere in the room, as the wireless link works over distances of up to 50 metres.

A solution which removes the need for trailing cables between your computer and interactive whiteboard by providing a reliable wireless connection.

Wireless link specification

Operating System required	Windows XP, Windows 2000
Range	50 metres
Bluetooth Standard	1.1
Accessories supplied	Slimline power adaptor, Quick Start Guide, User Guide on CD
Warranty	3 years return to base
Certification	USB adaptor : CE, FCC, METL (UL)
Serial adaptor :	CE (FCC tested)
Data transfer rate	721 kbit/s
USB compliance	1.1
Bluetooth profiles support:	USB adaptor : SPP, DUN, FTP, OPP, FAX, LAN
Serial adaptor :	SPP
