

## PX Interactive Software

### PX interactive software

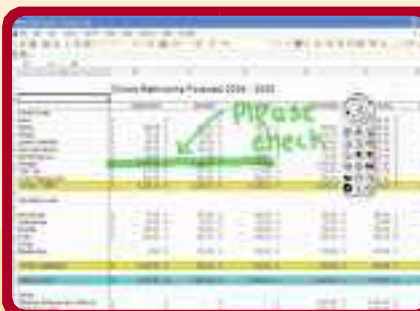

Used in conjunction with the PRESENTA range, Px software provides an easy to use, intuitive floating toolbox of features to enhance the delivery of important information, making it more visually stimulating.

Px software has been designed specifically for ease of use, so even the most novice user can deliver exciting content rich presentations, training sessions or lessons with minimal training.

Px provides an electronic flipchart and extensive range of presentation tools in the form of a customisable floating toolbox that may be moved around the screen and used to interact with any Windows application.

A unique pen is used to interact with the software. The cordless, battery free pen provides the same function as your computer's mouse but provides a natural pen input to use directly on the surface of the board or pad.

Anything that would have traditionally been written on a standard whiteboard or chalkboard can be prepared and presented using Px software. The electronic flipchart has unlimited pages with a range of available backgrounds such as clocks, handwriting paper, maps, graph paper, grids and even a category for sport.

Pen tools allow users to highlight and annotate presentation content, as in this spreadsheet

The difference using Px is that any work done can be saved to the computer for viewing, discussing, printing, emailing or reviewing later. Flipcharts can be saved as either HTML or PDF files so you can easily share your work with people who may not have Px software.

Fundamental to Px is the resource library. This contains clipart images and backgrounds which may be customised to suit user's needs and additional resources added as users develop.

**Features:**

Contained in the Px toolbar are powerful features to help draw attention to key points. The pen tool uses electronic ink over any flipchart page or Windows application in order to write notes, take feedback, and brainstorm ideas, while the highlighter tool allows you to highlight specific areas of text. The reveal and spotlight tools enable users to show just part of the screen that they wish to focus on.

It is easy to insert text into your flipcharts using the on screen keyboard or converting hand-written text into 'real' text using the handwriting recognition tool.

**Px tools:**

- Freehand pen with unlimited colours
- 12 Drawing tools
- Highlighter
- Eraser / clear screen
- Undo / Redo
- On-screen keyboard
- Handwriting recognition
- Record & playback
- Camera tool
- Reveal and spotlight
- User defined buttons
- Electronic flipchart
- Resource library with clipart and backgrounds

A range of drawing tools are also included so that you can quickly and easily add

shapes, straight lines, arrows or customised shapes into your flipchart.

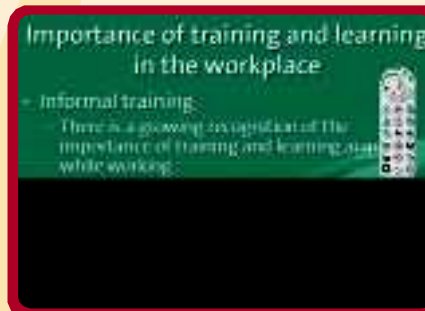

**Px**

Description

Easy to use floating toolbox comprising annotation and presentation tools and an electronic flipchart

System requirements

Pentium II 233 Mhz processor (or equivalent), 64 mb RAM, 150 mb hard disk space, one free serial or USB port, Windows 95, 98, ME, NT4.0 (SP6), 2000, or XP operating systems

The reveal tool allows users to obscure parts of the screen and control the display of content
